

### III. King County in the Puget Sound Region

This chapter places King County within the context of the Puget Sound Region and gives an overview of the demographic, economic and development trends of King, Pierce, Snohomish, and Kitsap Counties. King County is the largest of the four counties in terms of both land area and population. King County influences and is affected by forces that have their origin beyond County borders. It is important to consider the role King County occupies and the forces which affect it across jurisdictional boundaries.

This chapter presents summary data for each county, and some tables provide detail on unincorporated areas and the largest city in each county.

King County: **Seattle**

Kitsap County: **Bremerton**

Pierce County: **Tacoma**

Snohomish County: **Everett**

### Different Measures of Income In King County

**Income** refers to money coming in to individuals and families from all sources: wages, interest, dividends, rents, social security and pensions. The 1990 Census reported 1989 income for households and families in King County.

**Household Income** is income earned by each household, which often includes more than one wage earner. A household is the person or group of people who occupy a housing unit.

**Family income** is income earned by each family of two or more related persons living together. Family income is higher than household income because it excludes single-person households who generally have lower incomes. Almost two thirds of King County families had two or more wage earners in 1990.

**Per capita income** divides the total income by the total number of people in King County whether or not they earn any income.

The **median** is the midpoint of all household or family incomes. Fifty percent of the households or families have incomes below the median, and fifty percent are above the median.

The **mean** or **average** (not reported here) divides total income by the number of households or families. It is higher than the median because of the elevating effect of a few very high incomes. For this reason, the median is more often used to represent typical household or family income.
